

ATRIA'S RESTAURANT

lyndhurst, ohio

GFRC

When Atria's Restaurant and Tavern needed a fresh and distinctive facade for their restaurants, they turned to Stromberg Architectural. Using Glass Fiber Reinforced Concrete (GFRC), we produced unique column and pilaster elements to create a truly distinctive look. The scale of the entrance is grand, but it retains its homey, feel-good character. This juxtaposition of the laid-back and the elegant creates a charming yet sophisticated look that stands out to passersby.

Restaurant design and construction is always challenging, as it requires balancing the need for top quality appearance as well as keeping up with the fast paced schedules.

Using GFRC allowed the restaurant to have a durable, top quality stone facade while keeping up with the tight construction schedule. With over thirty years of restaurant construction experience, we work with owners, designers, and contractors to assist them with all their restaurant and hospitality construction castings and themed element needs.
