

DALLAS AREA RAPID TRANSIT

dallas, texas

When the Dallas Area Rapid Transit (DART) authority wanted to upgrade the accessibility and safety of the light rail for the visually impaired, they contacted Stromberg.

Dallas' public transportation system is expanding, especially in the area of its light rail train system. Stromberg fabricated special floor sections, textured with raised bumps, which will be placed next to the edge of rail lines to assist with the ADA needs of the public. This tactile flooring will alert blind passengers that they are nearing the edge of the platform and the tracks themselves. Stromberg columns, benches, planters and cigarette receptacles are also features of DART stations.

These amenities are constructed of Glass Fiber Reinforced Concrete (GFRC). Stromberg is the best in the business for handling GFRC projects. For "solid as a rock" amenities, GFRC offers many advantages in design.
